

...“Breast or bottle?  
We enjoy both.”...

Baby bottles and teats  
NUK First Choice<sup>+</sup>

Understanding Life.

## Copied from nature: the NUK Teat Shape.

The mouth plays a very critical role in the overall development of your child. Breathing, feeding, sensory perception – they all require perfect interaction between the jaw, palate, tongue and lips. With breastfeeding, this is practised from birth on.

Hardly any other shape in bottle feeding succeeds in coming so close to the example set by nature as NUK First Choice<sup>+</sup>. Forming the basis for this is the NUK Teat Shape that specially suits the jaw.

Like a mother's nipple during breastfeeding, NUK First Choice<sup>+</sup> Teats are not round, but asymmetric. They adapt optimally to a child's mouth and also offer your baby maximum softness – for active jaw training and a natural feeling while drinking, just like at the mother's breast.

All NUK Bottles and Teats are manufactured exclusively in Germany and undergo strict testing. Test seals, such as the one from the independent Fresenius Institute, confirm the highest quality.

## Relaxed drinking, just like breastfeeding: NUK First Choice<sup>+</sup>.

Clinical studies have shown that, due to their particularly natural shape, NUK Teats are very well accepted by babies. NUK First Choice<sup>+</sup> is therefore ideal when you would like to both bottle and breastfeed.\*

### NATURAL AND RIGHT FOR THE JAW

The special NUK Shape is modelled on the nipple during breastfeeding. It leaves the tongue and jaw sufficient room for natural sucking movements.

### SOFT LIKE THE BREAST

The "soft zone" lets the teat adapt even better to the palate – for a natural feeling while drinking.

### PREVENTS COLIC

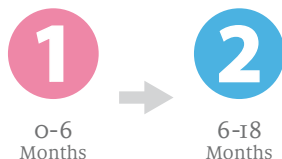

The improved Anti-Colic Air System ensures a natural flow of liquid, letting your baby drink easily without swallowing air.

\* For an optimal combination of bottle and breastfeeding. Moral et al.  
BMC Paediatrics 2010, 10:6.

## Teats that grow with you: the NUK Size Concept. Teats for every age.

NUK First Choice<sup>+</sup> Teats are made out of high-quality silicone and grow with your child. Please note that the ages given are purely advisory. The size always depends on the individual development of your child.

## Right for every type of food: the NUK Teat Hole Sizing.

NUK offers different hole sizes for every teat according to the contents of the bottle – easy to see on the edge of the teat below the vent of the NUK Anti-Colic Air System.

Small = Tea

For thin liquids such as breast milk, first infant formula, tea or water

Medium = Milk

For baby formula

Large = Baby Food

For thicker liquids

## Practical for at home and on the way: the new baby bottles.

The NUK First Choice<sup>+</sup> Bottles are made out of the very light and robust material polypropylene. Due to their fitted shape they perfectly fit into moms and baby's hand. The bottles are break-proof and dishwasher save and can even be deep-frozen. The practical baby bottles, with the wide bottleneck for easy filling and cleaning, come in four new great designs.

\* The sale of baby bottles containing BPA has been prohibited in the EU since 01.06.2011.

## Opened and closed in no time: the NUK Open-Close System.

The patented NUK Open-Close System replaces the standard closing disc. This way your baby routine – at home or out and about – becomes clean and easy: simply turn the screw cap between the bottle and the teat's screw ring – that's all. Suitable for all NUK First Choice bottles. Now available in three different colours (white, green and pink).
